

Model No: KL06 24V, KL06-M & KL06RF Wiring Centre

The SALUS regulator terminal strip KL06 provides the ideal connection between room thermostats and control drive units. SALUS room thermostats and SALUS control drive units can be connected in the easiest and safest possible way without the use of tools.

The circuit display enables you to gain a simple and clear optical overview of the circuits while, at any time, integrated LED's keep you informed of the operating status. The built-in fuse protects the control terminal strip against overvoltage and can be replaced easily if necessary.

Features

- Cable connection without tools by plug-in system
- Up to 6 thermostats and 24 drive units connectable
- Clear and unmistakable marking of the terminals
- Easy strain relief integration
- Control of the functions by LED's
- Space for marking for simple recognition
- Suitable for DIN Rail rails or wall attachment
- Up-gradeable with pump logic module
- Suitable for heating and cooling operation
- Integrated overload protection
