ZIGBEE THERMOSTAT

WQ615RF

The SALUS WQ615RF thermostat with it's WQ615RX receiver is designed for easy management of electric heating systems. Combining modern technology with practicality, it simplifies temperature control for improved comfort and energy efficiency.

Wireless Integration:

Utilizes ZigBee 2.4 GHz technology, enabling a seamless connection between devices for synchronized heating control.

Eco-Friendly Power

The thermostat is powered by a rechargeable Li-Ion battery, for added convenience.

Simple and Intuitive

Features a user-friendly display that provides clear information on temperature settings, program status, and battery levels.

Expandable System

The receiver supports a master-slave configuration, controlling up to 4 slave receivers to manage multiple infrared panels effortlessly.

HOW IT WORKS?

Pair the devices

Connect the WQ615TX thermostat to the WQ615RX receiver using the PAIR button.

Configure zones

Assign zones and pair additional slave receivers if needed.

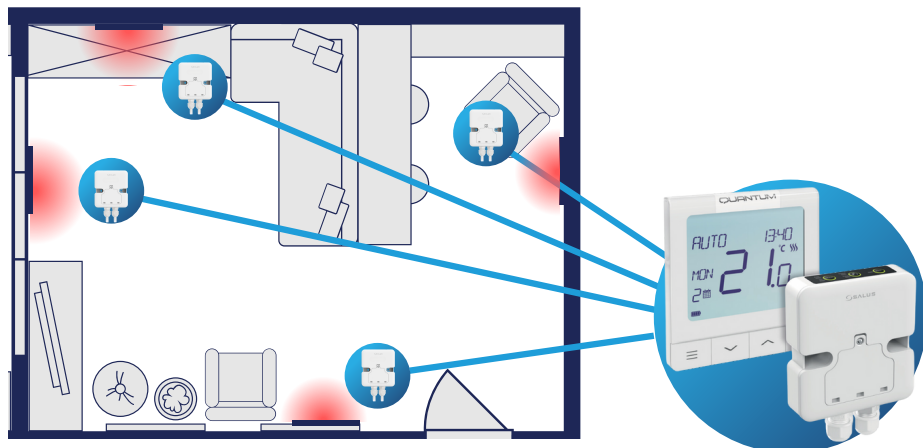

Monitor

View and adjust system settings easily with the thermostat's display.

Set schedules

Use the intuitive interface to customize heating schedules for each zone.

Control up to 5 infra red heating devices...

The SALUS WQ615RF thermostat comes pre-paired to the WQ615RX receiver which can then be linked to an additional 4 more receivers all connected to infra red heating panels throughout the home.
